PROFESSIONAL SUMMARY

CompTIA CySA+ and Security+ certified cybersecurity professional with 7+ years spanning enterprise infrastructure, security operations, and application security. Experienced in **SIEM monitoring**, **threat detection**, **alert triage**, **incident investigation**, and **detection engineering**, backed by a hands-on offensive/defensive (purple-team) home lab. Proven ability to correlate telemetry across endpoint, network, and log sources, distinguish operational failures from malicious activity, and respond to production-impacting incidents under pressure.

CORE COMPETENCIES

Security Operations	Alert Triage, Incident Investigation & Response, Threat Intelligence, Log Correlation, IOC Analysis, Root Cause Analysis, Security Monitoring, Escalation
Detection & Hunting	SIEM (Wazuh), Detection Engineering, YARA, Sysmon, MITRE ATT&CK, Threat Hunting, EDR/XDR Concepts, Vulnerability Assessment, NIDS (Suricata)
Offensive Security	Web App Pentesting, OWASP Top 10, SQL Injection, Nmap, Metasploit, Hydra, Burp Suite, Wireshark, BloodHound, Kali Linux
Zero Trust & Network	Application Allowlisting, Zero Trust Policy, Network Security, Firewall Diagnostics, VPN, Okta, Compliance
Systems & Identity	Windows Server, Active Directory, Group Policy, Azure AD, Office 365, Linux, VMware, Hyper-V, Proxmox
Scripting & Tools	Python, PowerShell, Bash, SQL, Jira, Git/GitHub

PROFESSIONAL EXPERIENCE

Application Security Analyst	Apr 2025 – Mar 2026
ThreatLocker — Orlando, FL	- Analyzed application and script execution behavior to make secure allow/deny decisions, enforcing a default-deny Zero Trust model across distributed enterprise endpoints. - Investigated software behavior and potential vulnerabilities through SIEM-style log analysis and backend diagnostics. - Partnered with engineering teams to improve approval precision and tighten Zero Trust policy, reducing risk while maintaining high availability. - Delivered secure application allowlisting policies that mitigated execution-based threats across client environments.
Application Technician	Oct 2024 – May 2025
ThreatLocker — Orlando, FL	- Built customer-replicated virtual infrastructure (VMware, Hyper-V) to analyze application behavior and validate security policy before production deployment. - Captured application behavioral changes and backend execution patterns to support ongoing security and compliance. - Performed infrastructure-level diagnostics in a 24/7 operational environment; managed test labs validating policy changes.
Technical Support	Jul 2024 – Oct 2024
ThreatLocker — Orlando, FL	Provided security-focused technical support for MSPs and enterprise administrators deploying endpoint protection, application control, and Group Policy at scale.

- During the **July 2024 CrowdStrike Falcon outage**, correlated mass endpoint failures across customer environments against emerging vendor and security-community reporting to rapidly distinguish a faulty third-party sensor update from malicious activity — accelerating triage and guiding restoration of impacted systems.
- Built virtual server and Domain Controller labs to replicate escalation scenarios; resolved firewall and connectivity issues while maintaining 99%+ satisfaction in a 24/7 environment.

Support Engineer

Aug 2022 – Jun 2024

onePOS — Orlando, FL

- Delivered remote technical support across distributed nationwide systems; documented root-cause findings in Jira to improve reliability.
- Troubleshoot and hardened networked endpoints, hardware, and connectivity for transaction-processing environments.

Jr. Systems Administrator

Jan 2017 – May 2022

Capstone Logistics — Orlando, FL

- Administered Windows Server, Active Directory, and Group Policy; enforced security permissions and standardized user configurations.
- Managed disaster recovery, backups, and compliance patching for business-critical systems at 99%+ uptime.
- Secured and troubleshoot LAN/WAN connectivity across multiple locations in a 24/7 operation.

— SECURITY PROJECTS

Purple-Team Home Lab ("Namek"). Designed an isolated QEMU/KVM lab — Kali attacker, Windows 11 target, and an Ubuntu Wazuh SIEM + Active Directory server — on a segmented, air-gapped network for safe offensive/defensive practice. github.com/pervis007/cybersecurity-homelab

Wazuh SIEM Detection & Vulnerability Assessment. Deployed Wazuh with Sysmon endpoint telemetry, executed and detected an SSH brute-force attack (Hydra), and authored a full vulnerability-assessment report with MITRE ATT&CK mapping, root-cause analysis, and Windows hardening guidance. github.com/pervis007/cybersecurity-wazuh-siem

Ransomware Detection Engineering (YARA + Wazuh). Authored YARA rules and a Wazuh FIM/active-response pipeline targeting ransomware's high-fidelity behaviors (recovery sabotage, ransom notes, encryption bursts); **validated live** — fired real level-14 critical alerts (T1486/T1490) — with a full threat & detection assessment report. github.com/pervis007/cybersecurity-ransomware-detection

LOLBin / Application-Control Bypass Detection (Sysmon → Wazuh). Engineered custom detections for living-off-the-land binary abuse (mshta, rundll32, regsvr32, msixexec, certutil), validated against a live Kali-originated attack chain and mapped to MITRE ATT&CK **T1218**; included detection tuning that eliminated false positives while retaining full coverage. github.com/pervis007/cybersecurity-lolbin-detection

Web Application Penetration Test (OWASP Juice Shop). Used Burp Suite to identify and exploit SQL injection for a full admin authentication bypass and data extraction; produced a CVSS-scored VA report mapped to OWASP Top 10 with remediation. github.com/pervis007/cybersecurity-juiceshop

SharePoint Application Hash Catalog. PowerShell automation cataloging and installing the full SharePoint Server update history to capture every application hash for Zero Trust allowlisting. github.com/pervis007/SharePoint-Scripts

— CERTIFICATIONS

- CompTIA CySA+ — Valid through May 2028
- CompTIA Security+ — Valid through May 2028
