PROFESSIONAL SUMMARY

CompTIA CySA+ and Security+ certified Cybersecurity Analyst with 7+ years across security operations, enterprise infrastructure, and application security. Experienced in SIEM monitoring, threat detection, alert triage, incident response, and detection engineering, backed by deep Active Directory, Windows Server, and endpoint security expertise. Proven record of 99%+ ticket resolution, correlating telemetry across endpoint, network, and log sources, and distinguishing operational failures from genuine security incidents under pressure.

CORE COMPETENCIES

- Security Operations:** Security Operations Center (SOC), Alert Triage, Incident Response, Incident Investigation, Threat Detection, Threat Hunting, Threat Intelligence, Log Analysis, Log Correlation, IOC Analysis, Root Cause Analysis, Security Monitoring
- Detection & Tooling:** SIEM, Wazuh, Detection Engineering, MITRE ATT&CK, YARA, Sysmon, Suricata (NIDS), EDR/XDR, Endpoint Security, Vulnerability Assessment
- Offensive Security:** Penetration Testing, OWASP Top 10, SQL Injection, Nmap, Metasploit, Hydra, Burp Suite, Wireshark, BloodHound, Kali Linux
- Zero Trust & Network:** Application Allowlisting, Zero Trust, Default-Deny Policy, Firewalls, VPN, Okta, Network Security, Compliance
- Systems & Identity:** Windows Server, Active Directory, Domain Controllers, Group Policy (GPO), Azure AD, Microsoft 365, Linux, VMware, Hyper-V, Proxmox
- Scripting & Platforms:** Python, PowerShell, Bash, SQL, Git/GitHub, Jira

PROFESSIONAL EXPERIENCE

- Cybersecurity Analyst I**
ThreatLocker — Orlando, FL

Jul 2024 – Mar 2026

 - Analyzed application and script execution behavior across distributed enterprise endpoints and made secure allow/deny approval decisions, enforcing a **default-deny Zero Trust** model that blocked execution-based threats.
 - Investigated software behavior and potential threats using **SIEM-style log analysis** and endpoint telemetry, distinguishing benign applications from malicious execution.
 - During the **July 2024 CrowdStrike Falcon outage**, correlated mass endpoint failures across customer environments against vendor and security-community reporting to rapidly distinguish a faulty third-party sensor update from a security incident — accelerating triage and guiding restoration of impacted systems.
 - Built customer-replicated virtual server, **Active Directory, and Domain Controller** labs (VMware, Hyper-V) to reproduce issues, validate security policy, and resolve AD/DC, Group Policy, and connectivity problems before production.
 - Partnered with engineering to tighten Zero Trust policy and improve approval precision, reducing risk while maintaining high availability; maintained **99%+ ticket resolution** supporting MSP and enterprise clients in a 24/7 environment.
- Support Engineer**
onePOS — Orlando, FL

Aug 2022 – Jun 2024

 - Led the **implementation and rollout of point-of-sale (POS) systems** for nationwide clients — owning deployment, configuration, and go-live support across distributed sites.
 - Troubleshoot **Active Directory / Domain Controller**, networking, and endpoint issues for client environments; documented root-cause findings in Jira to improve reliability.

- Hardened networked endpoints and connectivity for transaction-processing environments while sustaining **99%+ ticket resolution**.

Jr. Systems Administrator

Jan 2017 – May 2022

Capstone Logistics — Orlando, FL

- Administered **Windows Server, Active Directory, Group Policy, and Domain Controllers**; resolved AD/DC authentication and permissions issues and standardized secure user configurations across multiple sites.
- Managed disaster recovery, backups, and compliance patching for business-critical systems at 99%+ uptime.
- Secured and troubleshot LAN/WAN connectivity in a 24/7 operation, maintaining **99%+ ticket resolution**.

SECURITY PROJECTS

LOLBin / Application-Control Bypass Detection (Sysmon → Wazuh). Engineered custom detections for living-off-the-land binary abuse (mshta, rundll32, regsvr32, msixexec, certutil), validated against a live Kali-originated attack chain and mapped to MITRE ATT&CK T1218, with tuning that eliminated false positives. github.com/pervis007/cybersecurity-lolbin-detection

Wazuh SIEM Detection & Vulnerability Assessment. Deployed Wazuh with Sysmon telemetry, executed and detected an SSH brute-force attack (Hydra), and authored a full vulnerability-assessment report with MITRE ATT&CK mapping, root-cause analysis, and Windows hardening guidance. github.com/pervis007/cybersecurity-wazuh-siem

Ransomware Detection Engineering (YARA + Wazuh). Authored YARA rules and a Wazuh file-integrity / active-response pipeline targeting ransomware behavior (recovery sabotage, ransom notes, encryption bursts); validated live with real critical-level alerts (T1486/T1490). github.com/pervis007/cybersecurity-ransomware-detection

Web Application Penetration Test (OWASP Juice Shop). Used Burp Suite to identify and exploit SQL injection for a full admin authentication bypass and data extraction; produced a CVSS-scored assessment mapped to the OWASP Top 10 with remediation. github.com/pervis007/cybersecurity-juiceshop

Purple-Team Home Lab ("Namek"). Designed an isolated QEMU/KVM lab — Kali attacker, Windows 11 target, and an Ubuntu Wazuh SIEM + Active Directory server with Suricata NIDS — on a segmented network for safe offensive/defensive practice. github.com/pervis007/cybersecurity-homelab

CERTIFICATIONS

- CompTIA CySA+ — Valid through May 2028
- CompTIA Security+ — Valid through May 2028

EDUCATION

Purdue Global University — Information Technology, Software Development (Completed)

Jones High School — Orlando, FL
